

Questions and Answers III

Supply of equipment for waste management
in the Municipality of Bar, Montenegro

Tender ref. no. 002T/BWS/12

Q1	<p>In Annex II + III, Technical Specifications + Technical Offer, it still reads: • <u>Service requirements for LOT 1 only:</u></p> <p><i>“As proof for the quality and stabilised production, the bidder must provide evidence that the manufacturer of waste upgrades in the past 3 years (2009, 2010 & 2011) has produced at least 4,000 upgrades for collection, transportation and pressure of waste.”</i></p> <p>Please bear in mind that the above mentioned requirement is disproportionate and discriminatory for the purchase of only one refuse collection vehicle.</p> <p>Once more we request you that in order to allow the participation of all possible European manufacturers, you would consider replacing or removing this requirement.</p>
A6	<p>The requirement is removed and replaced by the following:</p> <p>The Tenderer must be certified in accordance with ISO 9001-2000 or ISO 9001-2008 standards and must submit the related certificates. The Tenderer must also submit at least two certificates of inspection for similar superstructures of refuse collection vehicles satisfying the requirements of EN 1501-1 standard provided by the authorized body.</p> <p>The Contracting Authority hereby confirms that the deadline for the submission of offers continues to be postponed until 10th December 2012. Please check the third corrigenda published for the annexes II + III of the tender.</p>
